Dear Hiring Manager,

I am writing to express my interest in Head of UX, Head of Product Design, UX Design Manager, Principal Product Designer, Senior Product Designer, and relevant AI-focused product design leadership opportunities.

With over 20 years of experience across digital product design, UX strategy, visual communication, animation and creative direction, I bring a combination of strategic thinking, hands-on design expertise and product leadership. I hold a Master of Design (M.Des) from IIT Bombay and spent seven years leading product design at Openplay Technologies, part of the Nazara Group.

At Openplay, I led product design initiatives and helped transform Classic Rummy from a legacy Flash experience into a modern mobile-first product. My responsibilities included design direction, team leadership, interaction design, design systems and cross-functional collaboration with Product, Engineering and business stakeholders.

Since founding D'SARAS Design Studio in 2025, I have continued working across product design consulting, mobile commerce, design systems and AI-enabled workflows. My recent project, TWAM, demonstrates my practical adoption of emerging AI technologies: I used Claude for early concept exploration and Figma Make AI to develop an interactive mobile app prototype through iterative experimentation and refinement. I have also explored human-centred AI product experiences through ResolveAI, a B2B SaaS concept focused on human–AI collaboration. These experiences reflect my ability to combine established design principles with emerging technologies while keeping human judgement, usability and business goals at the centre.

I bring the ability to lead and mentor multidisciplinary design teams, establish UX standards, influence product direction, collaborate with senior stakeholders and translate complex business requirements into meaningful user experiences. I am particularly interested in opportunities where I can combine UX strategy, design leadership, product thinking and practical AI experience to solve complex problems and create lasting product value.

I would welcome the opportunity to discuss how my experience and approach could contribute to your team. Thank you for your time and consideration.

Sincerely,

Dharmarao Balaga
